Summary

Analytically driven Deakin University final-year student, CFA Level 1 candidate and Data Analyst Intern seeking to build a career in Internal Audit. Experienced in translating large, complex financial and transactional datasets into risk insights, anomaly detection, and control-improvement recommendations using SQL, Power BI, Excel, and Python.

Education

Deakin University — **Melbourne, VIC**
Bachelor of Business Analytics – Fintech — *July 2024 – July 2027*

Skills

Data Analytics & Assurance: SQL (advanced queries, CTEs, window functions), Python (Pandas, NumPy), Advanced Excel.
Business Intelligence & Reporting: Power BI (DAX, Power Query, Data Modeling), Tableau.
Financial & Risk Analysis: Financial modeling, forecasting, vendor/spend concentration analysis, payment-anomaly detection, data governance.
Databases & Systems: PostgreSQL, MySQL, Oracle, MongoDB, Snowflake; cloud fundamentals in AWS (S3, EC2, Athena) and Microsoft Azure.
Communication & Stakeholder Engagement: Delivered strategic findings and recommendations to industry judges and client leadership; comfortable presenting analysis to stakeholders at different levels.

Relevant Project Experience

Public Sector Spend Analytics & Cost Reduction Model — **GitHub**
Data Governance, Financial Modeling

- Analyzed £1.3B+ in municipal spend across 300K+ transactions, building a dashboard to detect payment anomalies and track vendor concentration.
- Applied data governance principles to structure and validate large public-sector datasets ahead of analysis, ensuring data integrity and traceability of findings.
- Built a prescriptive savings model (low/base/high scenarios) that identified £5.84M in achievable savings through vendor consolidation and duplicate-spend elimination, translating raw data into actionable business recommendations.
- Isolated the top 20 vendors (30% of total spend) to highlight concentration risk and inform procurement policy.

Customer Segmentation & Predictive Analytics Engine — **GitHub**
Python, scikit-learn, Power BI, K-Means

- Processed and validated 540K+ retail transactions, applying an extended RFM and behavioral analytics framework to test data quality and identify patterns of interest to business stakeholders.
- Applied K-Means clustering to segment a 4.3K-user database, isolating a critical "Champion" cohort responsible for £6.07M (68%) of revenue.
- Delivered findings via an interactive Power BI dashboard, giving stakeholders a repeatable tool for ongoing monitoring rather than a one-off report.

E-Commerce Data Warehouse & BI Dashboard — **GitHub**
MySQL, Data Modeling, Power BI, ETL

- Consolidated 9 raw datasets (100K+ orders, 32K+ products) into a centralized, production-ready MySQL data warehouse to uncover margin leaks across $16M+ in historical revenue.
- Designed an executive Power BI dashboard utilizing DAX to separate leading indicators (category sales volume) from diagnostic metrics (freight cost burdens, delivery bottlenecks), supporting root-cause analysis of process breakdowns.
- Delivered 10 data-driven strategic interventions enabling stakeholders to optimize regional marketing spend and mitigate late-delivery churn, demonstrating the ability to turn analysis into practical, actionable improvement opportunities.

Awards & Competitions

3rd Place – Deakin Bowater Business Challenge (Furphy Geelong) — **Sep 2026**
Deakin University

- Ranked 3rd out of competing teams in a university-wide business consulting competition, advising Furphy Geelong ($23M steel fabrication, galvanizing, and coatings manufacturer) on a corporate growth strategy.
- Conducted primary research into capacity constraints, customer segmentation, and market expansion, then designed a commercial strategy defining scope, ownership, and delivery timelines.
- Presented strategic recommendations to industry judges and client leadership, developing confidence engaging senior stakeholders.

Certifications

Microsoft Certified: Power BI Data Analyst Associate (PL–300) — **Oct 2026**
Microsoft – Verify credential

- Validated skills in preparing, modelling, and visualising data, and in deploying and maintaining Power BI reports and dashboards, supporting data-driven audit testing and stakeholder reporting.
